Degenerative Myelopathy - PCR

Result: Genotype N/N (exon 2)

Interpretation: The examined animal is homozygous for the wildtype-allele. It does not carry the high-risk factor for DM in exon 2 of the SOD1-gene.

Trait of inheritance: autosomal-recessive

Please note: In the Bernese Mountain Dog breed the mutation in exon 1 of the SOD1-gene also occurs in correlation with DM.

The current result is only valid for the sample submitted to our laboratory. The sender is responsible for the correct information regarding the sample material. The laboratory can not be made liable. Furthermore, any obligation for compensation is limited to the value of the tests performed.

There is a possibility that other mutations may have caused the disease/phenotype. The analysis was performed according to the latest

sample ID: 1712-N-12734

knowledge and technology.

The laboratory is accredited for the performed tests according to DIN EN ISO/IEC 17025:2005. (except partner lab tests).

\*\*\* Diagnostic Update Strangles \*\*\*

In addition to our PCR panel (simultaneous detection of Strep. equi equi and Strep. equi zooepidemicus, test no. 8171), we now offer a single PCR detection of Streptococcus equi equi (test no. 8556).  
Sample material: nasal swab without medium, lavage (guttural pouch), tissue (e.g. lymph node).
